Editors-in-Chief
Neural Processing Letters

Dear Editors,

We are pleased to submit the manuscript entitled *Pruning Deep Neural Networks via the Marchenko–Pastur Distribution* for consideration as a Letter-format submission to *Neural Processing Letters*.

The manuscript presents a concise main article on random-matrix-guided neural-network pruning. Its central contributions are a Marchenko–Pastur-driven pruning methodology, deterministic data-path certificates for mask pruning, and ImageNet-scale evidence for unstructured and structured sparsity under short post-pruning fine-tuning budgets. We believe this fits the journal’s emphasis on concise communications reporting methodological and theoretical advances in neural networks and machine learning.

To keep the main manuscript in Letter form, the submission separates the detailed material into two online resources. Online Resource 1 contains proofs and the mathematical supplement. Online Resource 2 contains methodology, reproducibility details, checkpoint and timing ledgers, and extended comparison tables. These online resources are supplied to support verification and reproducibility; they are not intended as independent companion articles.

The manuscript is original, has not been published previously, and is not under consideration elsewhere. All authors have approved this submission and agree to be accountable for the work. The paper uses publicly available datasets and pretrained checkpoints; code, checkpoint provenance, and data-availability details are described in the manuscript and online resources.

Thank you for considering our submission.

Sincerely,

Yitzchak Shmalo
on behalf of the authors
